

Claims

1. Tube (20, 30, 40, 50), for feeding fastening elements (1) with a circular head (2), for a fastening apparatus (100), made from transparent material, characterized in that its effective inner cross section (21, 31, 41, 51) is not circular.
- 5
2. Tube (20, 30) according to Claim 1, in which the inner wall (21, 31) is ribbed longitudinally (23, 33).
- 10
3. Tube (20) according to Claim 2, in which the ribs (23) are made from the same material as that of the tube (20).
- 15
4. Tube (30) according to Claim 2, in which the ribs (33) comprise beadings (33) made from a material other than that of the tube (30).
- 20
5. Tube (40) according to Claim 1, in which the inner cross section (41) is of substantially polygonal shape.
- 25
6. Tube (40) according to Claim 5, in which the inner cross section (41) is of substantially triangular shape.
7. Tube (50) according to Claim 1, in which the inner cross section (51) has a substantially rounded-star shape.
